CAASPRE Consulting Releases Abra2BST Version 1.4.0
September 2, 2010

CAASPRE Consulting is pleased to announce the release of our latest version of Abra2BST, version 1.4.0 which is compatible with Abra version 7.8x and Abra version 9.0x. The User Manual has also been revised to address the changes required with Abra version 9.

This release remains compatible with BST version 8.4.

Since the release of 1.3.51 we have fixed several defects and added some new features. One of the coolest features is the new online update feature, allowing user to check and download new versions of Abra2BST from within the Abra2BST program.

"We have tested this version with Abra 7.8x and Abra 9.0 and it functions very well with both versions of Abra Payroll", said Ed Reiter, VP of Customer Experience.

CAASPRE Consulting solves complex business issues by providing enterprise-wide solutions architecture and business strategies, database architecture, modeling and design, custom programming, Business Process Management (BPM), report writing, Web and client-server-based application development and helping clients increase productivity by aligning their information technology infrastructure with their core business objectives.

Further, **CAASPRE Consulting** helps organizations create a Customer Experience culture from the inside out. A culture that brings the most import aspect of Customer Experience into play, the employees. We believe that Customer Experience begins with how organizations personnel treat each other.
